

EXECUTIVE SUMMARY

GetDraft now covers the **complete journey from first install to paid subscription**. Beyond the core product — verified accounts, rich profiles, the swipe-based "Draft" experience, real-time messaging and a built-in social feed — the platform now includes **identity verification (KYC) for every signup**, a **parent–athlete guardian verification flow** unique to GetDraft, **phone and Apple / Google sign-in**, and **in-app subscriptions with native card payments**. The two most sensitive flows — guardian linking and a real subscription purchase — were **verified end-to-end on a physical Android device on June 10, 2026**, against the live backend and database.

CORE MODULES DELIVERED

Live

BACKEND & DATABASE ONLINE

Device-verified

GUARDIAN FLOW & REAL PAYMENT

01 Accounts & Onboarding

✓ Four ways to sign in

A redesigned welcome screen offers **phone number** (SMS or WhatsApp code), **Apple**, **Google**, or classic **email + 6-digit code**. Returning phone users are recognised and **logged straight back in** from the same code — no duplicate accounts.

✓ Guided onboarding, plan last

Role → location → profile → **identity verification** → a per-role questionnaire that feeds matching → tutorial → plan selection. Every account is complete and verified before it enters the app.

02 Identity & Safety

✓ Identity verification on every signup (KYC)

Each new user verifies a government ID and a live selfie (**OCR, liveness and face-match**) before reaching the app — recruiters and athletes alike are real, verified people.

✓ Parent–athlete guardian verification

A GetDraft signature flow: the athlete shows a **secure QR**, the parent scans it, answers a relationship questionnaire and records a guided **video declaration**; an **admin reviews and approves** each link from a dedicated screen. Verified end-to-end on device, including the parent's "You're linked!" credential view.

✓ Public profiles with blocking

Every user has a public profile view, and anyone can be blocked directly from chat — blocked users disappear from Discover and messaging.

03 Subscriptions & Billing

✓ Three plans — \$0 / \$7 / \$15

Basic, Starter and Pro give **10 / 30 / 70 swipes per day**. The plan step can be skipped at signup (free Basic); "who drafted you" remains **free for everyone**.

✓ Native in-app payments

Subscriptions are purchased inside the app through the **native Stripe Payment Sheet** (saved cards supported), with in-app **upgrade, cancel and resume**. A real \$7 purchase was completed on device in Stripe's test mode. Safeguards guarantee **one subscription per user** — retries can never double-bill.

✓ Swipe packs

One-off swipe top-ups can be bought the same way when a day's quota runs out.

04 Profiles

✓ Fully editable profile with media

Users edit their name, location, bio, sport and photos; athletes additionally set position, level, height, weight, date of birth and gender. Photos and highlight videos can be added from the gallery and removed with a long-press; videos open in a full-screen player.

✓ **Map-based location**

Location can be set with a single tap ("use my current location") or by searching country then city, with a live map preview.

05 Discover & Matching — the "Draft" experience

✓ **Immersive swipe interface**

A full-screen card experience: swipe left/right to browse, up to **Draft** (show interest), down to **Pass**, plus double-tap to like. Each card's background adapts to the athlete's sport.

✓ **Daily quotas tied to plans**

Swipes are metered per plan (10/30/70 per day) with purchased packs adding bonus swipes on top.

✓ **Mutual matches**

When two users Draft each other, an instant "Game On!" match is created, opening a direct line of communication.

06 Draft Board — connections hub

✓ **Received, Sent, Matches & Messages in one place**

Users see who drafted them and can **Accept** or **Refuse**; review and **Withdraw** drafts they have sent; view confirmed matches; and open their conversations — all from a single tabbed board.

✓ **Conversation access on every connection**

A message action on each connection opens a private conversation directly.

07 Real-time Messaging

✓ **Private one-to-one chat in real time**

Any two users can message privately; messages are delivered to the other device in under two seconds, with **typing indicators** and **read receipts**, and the connection restores itself when the app returns from the background.

✓ **Push notifications**

New messages and drafts notify the recipient even with the app closed; tapping the notification opens the right conversation directly.

08 Social Feed — Posts & Reels

✓ **Share photos and videos**

From a dedicated tab, users publish photo **Posts** and video **Reels** with captions to a feed that switches between the two formats.

✓ **Likes and comments**

Viewers like (including double-tap), comment, reply to comments, and like comments — a complete and familiar social interaction layer.

09 Platform & Infrastructure

✓ **Live backend and database**

The application's server and database are deployed and online; the production database carries the full schema including identity, guardian and billing tables.

✓ **Media hosted within the platform**

Profile and post images, highlight videos and guardian declaration videos are uploaded to and served from the application's own storage.

All modules above are implemented and operating on GetDraft's live backend infrastructure. The guardian verification flow and a real subscription

purchase were **verified end-to-end on a physical Android device on June 10, 2026.**

TRY IT YOURSELF — WITH TWO ACCOUNTS

To experience the full product — including **real-time chat** and **mutual matching** — please create **two accounts** (ideally one **athlete** and one **recruiter / coach**, so they appear to each other in Discover):

1. **Sign up two accounts** — by phone number (code via SMS/WhatsApp), Apple, Google, or email. Each completes the quick **identity verification** step. Best done on **two phones** so you can watch updates happen live on both.
2. **Draft each other** in Discover — swipe up to **Draft** on each account. When both have drafted, an instant **"Game On!" match** is created.
3. **Open the chat** from the match and send a message — it appears on the other device in **under 2 seconds**, with typing indicators and read receipts.
4. **Explore the rest**: edit your profile and add photos, publish a **Post** or **Reel**, try a **plan upgrade** (test card 4242 4242 4242 4242 in test mode), and manage your **Draft Board**.

Tip: two devices show the real-time chat and matching best — but you can also sign in to the second account on the same phone. A parent account can be linked to an athlete via the QR guardian flow (Settings → Link a guardian on the athlete side).
