

Replying to Apple App Review

GetDraft · Guideline 2.1 — Information Needed

This is not a rejection. Guideline 2.1 “Information Needed” is a standard request on a first submission. Apple has paused the review and is waiting for answers. Once you reply with everything below, the review continues.

Apple asked seven questions. The answers to questions 2–7 are written out below — copy each grey box into **App Store Connect** → **App Review Information** → **Notes**. Question 1 is a video you need to record.

1. Screen recording **YOU MUST RECORD THIS**

Record on a **real iPhone**, not the simulator, running the latest iOS. Start recording *before* opening the app. Film in this order:

- 1 Launch the app from the home screen
- 2 Create a new account with an email address
- 3 Sign out, then sign back in using the demo account
- 4 Show the permission prompts: location during setup, then camera and photo library when adding a photo
- 5 The main screen: swipe right to Draft someone, swipe left to Pass, tap a card to open the full profile
- 6 Draft an athlete who has already drafted you, so the match screen appears — then open the chat and send a message
- 7 Open the Feed, then show **reporting** (the ... menu on a profile and on a post) and **blocking** (the ... menu on a profile)
- 8 Delete the account: More → Settings → Delete Account, showing both confirmations

There are no purchases to film. Paid subscriptions are switched off in the iPhone version of the app. There is no paywall, no subscription screen and no payment step anywhere in it. Say this in your reply, otherwise a reviewer will keep looking for a purchase flow and assume it is being hidden.

2. Devices and iOS versions tested

Only you can answer this one. Write the real iPhone models and iOS versions you tested on. Apple reviews on physical hardware and may ask follow-up questions, so do not guess. If the app has only been run in the simulator, test it on a real iPhone before replying.

iPhone [model], iOS [version]
iPhone [model], iOS [version]

3. What the app does and who it is for

GetDraft is a sports recruiting platform that connects athletes with coaches, recruiters and agents.

THE PROBLEM

Talented athletes go unrecruited because they have no direct line to the coaches looking for them, and recruiters cannot efficiently find prospects outside their existing networks. Recruiting today depends on personal connections, expensive showcase events, and geography.

HOW IT WORKS

Athletes build a profile with their sport, position, level, class year, photos and highlight video. Coaches, recruiters and agents browse athlete profiles filtered by sport, position, level and location.

Either side can express interest by "Drafting" the other (swipe right) or passing (swipe left). When both sides Draft each other it becomes a match, and only then does messaging open. Nobody can be contacted without having first expressed interest in the person contacting them.

The app also includes a world ranking board for each sport, based on profile strength and interest received, and a map showing where athletes and recruiters are located.

WHO IT IS FOR

- Athletes aged 13 and over, from high school to professional level
- Coaches, recruiters and agents at schools, colleges, clubs and agencies

Athletes under 18 must link a parent or guardian, who is notified of recruiter interest and whose approval activates the account.

4. How to set up and access the app

DEMO ACCOUNT (recruiter)

Phone: +213558780131

Code: 123456

Sign in with the phone number above. The verification code is always 123456. This is a test number, so no SMS is sent and no code is needed from your side.

The account is already fully set up, so signing in goes straight into the app. It is a recruiter account, so the main screen shows athlete profiles.

Please use this account rather than creating a new one. New sign-ups go through identity verification that requires a real passport or ID document, so a newly created account cannot get past that step.

WHERE TO FIND EACH FEATURE

Discover	opens when the app starts. Swipe right to Draft, left to Pass, tap a card for the full profile.
Draft Board	second tab. Received, Sent, Matches and Messages.
Globe	third tab. World map of athletes and recruiters.
Rankings	More tab, then Rankings. Opens on the World board.
Report	the ... menu on a profile, on any post, or in a chat.
Block	the ... menu on a profile.
Delete account	More, then Settings, then Delete Account.

No sample files are needed.

5. External services the app uses

Supabase	database, sign-in and file storage for profiles, photos, video and messages
Prelude	text-message codes for signing in by phone
Resend	automatic emails such as verification and password reset
Didit	identity verification for adult users
Mapbox	maps and location lookup
Expo	push notifications and app updates
Railway	hosting for the app's server

Payments: the iPhone version of the app does not sell anything. No payment processing takes place in this app.

The app does not use any AI services, advertising networks or analytics tracking.

6. Regional differences

The app works exactly the same in every region. There are no region-specific features, content or restrictions.

Content is not filtered by country: users can browse athletes and recruiters worldwide, and the ranking board covers every country.

The app is available in English only.

7. Regulated industry or protected material

GetDraft does not operate in a regulated industry and contains no protected third-party material. There are no team logos, league marks, broadcast footage or licensed sports data in the app. All photos and video are uploaded by the users themselves.

Identity verification is provided by Didit, an identity verification company we hold a commercial account with. We do not handle or store identity documents ourselves. Didit processes them and returns only the result of the check.

Regarding younger users: the app is rated 13+, and athletes under 18 must link a parent or guardian, who is notified of recruiter interest and whose approval is required before the account becomes active. Messaging only becomes possible after both people have expressed interest in each other, so no adult can start a conversation with a minor uninvited.

Before you reply, check these

- **Test on a real iPhone.** Apple states in its message that apps are reviewed on physical devices. This is the most common cause of a second round of questions.
- **App Store screenshots must show the app in use** — not the login screen, splash screen or title art. Apple mentions this explicitly.
- **Check the permission messages.** Each one must clearly say why the app needs access, and give an example of how the information is used.
- **Paste answers 2–7 into the Notes field**, not only into the reply message, so they are saved for future submissions too.
