

EXECUTIVE SUMMARY

The GetDraft mobile application has reached a major milestone: the core product is **fully functional on a live backend and database**. Athletes and recruiters can create verified accounts, build complete profiles, discover and connect with one another through the swipe-based "Draft" experience, communicate in real time, and share photos and videos through a built-in social feed. It is now available as an **installable Android app running on live infrastructure** — ready to try today. The sections below detail the modules delivered to date, followed by a short guide to trying it yourself.

CORE MODULES DELIVERED

Live

BACKEND & DATABASE ONLINE

Real-time

MESSAGING & SOCIAL FEED

01 Accounts & Onboarding✓ **Secure sign-up with email verification**

New users register and confirm their account with a 6-digit code sent to their email (with a resend option) before entering the app.

✓ **Guided onboarding**

A step-by-step flow captures role, plan, location and profile details so every account is ready to use from the first session.

02 Profiles✓ **Fully editable profile**

Users edit their name, location, bio, sport and profile photo. Athletes additionally set position, level, height, weight, date of birth and gender.

✓ **Map-based location**

Location can be set with a single tap ("use my current location") or by searching country then city, with a live map preview.

03 Discover & Matching — the "Draft" experience✓ **Immersive swipe interface**

A full-screen card experience: swipe left/right to browse, up to **Draft** (show interest), down to **Pass**, plus double-tap to like. Each card's background adapts to the athlete's sport.

✓ **Smooth, instant browsing**

Cards and their imagery are pre-loaded so swiping is fast and fluid, with the background changing in step with each card.

✓ **Mutual matches**

When two users Draft each other, an instant "Game On!" match is created, opening a direct line of communication.

04 Draft Board — connections hub✓ **Received, Sent, Matches & Messages in one place**

Users see who drafted them and can **Accept** or **Refuse**; review and **Withdraw** drafts they have sent; view confirmed matches; and open their conversations — all from a single tabbed board.

✓ **Conversation access on every connection**

A message action on each connection opens a private conversation directly.

05 Real-time Messaging

✓ **Private one-to-one chat in real time**

Any two users can message privately; messages are delivered to the other device in under two seconds, with no refresh required.

✓ **Inbox with search and unread indicators**

A conversations inbox lists chats with message previews and unread counts, and includes a search to start a new conversation with any user.

06 Social Feed — Posts & Reels

✓ **Share photos and videos**

From a dedicated tab, users publish photo **Posts** and video **Reels** with captions to a feed that switches between the two formats.

✓ **Likes and comments**

Viewers like (including double-tap), comment, reply to comments, and like comments — a complete and familiar social interaction layer.

07 Platform & Infrastructure

✓ **Live backend and database**

The application's server and database are deployed and online, so the product is fully operational over the internet.

✓ **Media hosted within the platform**

Profile and post images and videos are uploaded to and served from the application's own storage.

All modules above are implemented and operating on GetDraft's live backend infrastructure.

TRY IT YOURSELF — WITH TWO ACCOUNTS

To experience the full product — including **real-time chat** and **mutual matching** — please create **two accounts** (ideally one **athlete** and one **recruiter / coach**, so they appear to each other in Discover):

1. **Sign up two accounts** — each confirms with the 6-digit code sent by email. Best done on **two phones** so you can watch updates happen live on both.
2. **Draft each other** in Discover — swipe up to **Draft** on each account. When both have drafted, an instant **"Game On!" match** is created.
3. **Open the chat** from the match and send a message — it appears on the other device in **under 2 seconds**, with no refresh.
4. **Explore the rest**: edit your profile and set your location on the map, publish a **Post** or **Reel** and like / comment, and manage your **Draft Board** (accept, refuse, withdraw).

Tip: two devices show the real-time chat and matching best — but you can also sign in to the second account on the same phone.
